Feedback

The magazine is really good and informative too, but I would be very happy to see the design get better! This Magazine is a hit

- Mudit, Delhi

The Magazine is smart and good. It is excellent in terms of technology

iPod Shuffle

The 1GB iPod shuffle lets you wear up to 240 songs on your sleeve. Or your lapel. Or your belt. In your choice of remixed colors and just US\$99, clip on iPod shuffle and wear it as a badge of musical devotion.

New colors

iPod shuffle now comes in four new colors and the original silver to suit your music and your mood

Clip and Go

Put some music on: iPod shuffle is the only iPod that's wearable right out of the box.

iTunes

Collect music on the iTunes Jukebox. Buy songs from the iTunes Store. Sync them to iPod shuffle.

iPod Classic

Decisions, decisions. Who needs 'em? Why should you have to choose what to put on your iPod? With up to 160GB of storage, iPod classic lets you carry everything in your collection — up to 40,000 songs and up to 200 hours of video — everywhere you go. In a completely new, even thinner all-metal design starting at US\$249, this iPod is a modern classic.

Up to 160GB

iPod classic puts your entire music and video collection in your pocket.

Enhanced Interface

Experience a whole new way to browse and view your music and video.

Cover Flow

Use the patented Click Wheel to flip through your music by album cover

Sleeker Design

Beautifully durable, iPod classic looks the part in a sleek new all-metal enclosure.

iPod Nano

Pod Nano one of the most successful iPods one can think of is now taken to the Generation 3 i.e the new iPod Nano features a 2" screen which now can play videos too...

The new design to the iPod looks another iPod Classic but it also suits to the size this new iPod Nano costs. \$149 or Rs 8800.

Everyone wants to play movies also on the iPods. But this can only play .mp4 and .mov files to convert the movies to iPod you may use Videora 3.04

iPod Touch

We have all discussed about the iPhone the iPod + Phone + Internet device. This one is a copy of what iPhone was i.e. a touch screen display and the same design the main problem with this is that it is not very cheap! We get it at

a higher price than the iPhone does.

The new design also marks the beginning of iPods having touch screen.

Viewing pictures and movies will be better than any iPod.

This marks the beginning of another generation

Featured

RAW Power Meets Raw Power

On the one hand, you have the application designed from the ground up to make working with RAW images as easy as working with JPEGs. On the other, you have the fastest, most feature-rich family of Mac computers ever.

Bring Aperture 1.5 and the new Macs together, and you have the ultimate photographer's workstation. The ideal systems on which to run the photo workflow application that

delivers all the speed you need to work with and manage photos of any type. RAW, JPEG, or TIFF.

Aperture — enthusiastically adopted by some of the world's finest professional photographers — set the standard for professional photo management applications. And the latest version, Aperture 1.5, introduces a wide range of new features. They include more flexible photo management options that let you store images wherever you'd like. XMP metadata export. An advanced Color adjustment tool. A new Edge Sharpen tool. Metadata presets that automatically add such critical data as copyright,

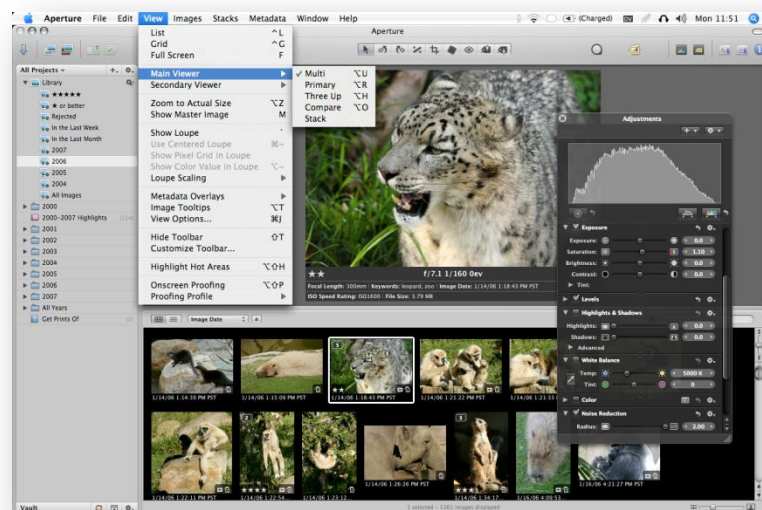

credit, and captions. New options for the Loupe that make a great tool even better. Adjustment presets. And many other new and enhanced features.

Aperture 1.5 also provides RAW support for more than 70 camera models — from Canon, Nikon, Fujifilm, and other leading manufacturers.

Supporting every member of the Mac family, Aperture 1.5 runs on every desktop — from Mac mini to iMac to Mac Pro — and every notebook — including both the MacBook and MacBook Pro. So you can run Aperture at home or in your studio. And you can take all your photos with you on location or to a client's office. Aperture and the Mac make one unstoppable team.

Like to see how Aperture and the Mac are helping pros bring their best work to light? Then pay a visit to the Aperture Profiles page and see why such pros as Vincent Laforet, Steve Winter, and Bill Frakes have standardized on Aperture and the Mac.

If you're not using Aperture yet, you can learn more about this groundbreaking photo application on the Aperture Overview page. Those of you already using Aperture should visit the What's New page to see how much more productive and creative you can be with Aperture 1.5. Or you can download Aperture 1.5 right now and start taking advantage of all its new features.

iPod Review

NANO is NANO

Note: This review is for iPod Nano 8GB BLACK Model

Model: iPod Nano 8GB

Color: BLACK

Developer: Apple

Rating : ★★★★★

Vidit Bhargava

Every time we talked about the iPod NANO 2G i.e. the long slim small screened iPod. From 2G to 3G, Long and Slim to Short and Broad, From small screens to 2inch diagonal screen. The iPod Nano 3G has turned from an average product to a technical masterpiece! This iPod has a clearer screen than that of iPod Classic or iPod Touch. The Touch D pad and the controlling keys have also improved but the main thing to look in the iPod is the Video facility, a true masterpiece for videos I watched a movie and Yuvraj Singh's Blitz in the T20 Cup and was amazed to see the video clarity it's awesome. The

Cover Flow is one of the features where I would like to give it

7/5 stars yes, don't be amazed to see 7 stars out 5 because it is one feature that's over the imaginations. It is a true nano iPod of the bigger iPod Classic. The features like contacts list, games, and calendars, photos, videos, world Clock, Multiple Alarms, Notes, Screen Lock, Stopwatch and a wider display deserve a standing ovation. The iPod is not only well finished but

is cheap also. A one liner for this iPod will be straight and simple “The Atom Bomb from Apple”. The Nano has a long way to go.

Don’t wait any longer just go grab this masterpiece as it’s not available at all retail outlets of Apple.

MAC MANIA

MAC BOOK

Better bang-to-buck ratio

The most advanced and affordable Mac notebook ever gives you a blazingly fast mobile architecture in a beautiful design that costs less than slower, clunkier models. It's like getting a sports car for the price of a scooter. Talk about performance — MacBook is powered by an Intel Core 2 Duo processor with speeds revving up to 2.16GHz. And all models pack a performance-enhancing 4MB of shared L2 cache.

Pack more punch

In bright white or sleek black, MacBook supports up to 2GB of memory and plenty of storage. All models offer larger hard drives, but if you haul a lot of data around,

you can order your MacBook with up to 200GB of storage. That's not all. MacBook keeps you untethered courtesy of built-in Bluetooth and AirPort Extreme 802.11n Wi-Fi offering up to five times the performance and up to twice the range as the previous generation.¹ An 8x double-layer-burning SuperDrive — standard equipment on the 2.16GHz models — not only lets you burn DVDs faster but lets you burn capacious double-layer media.

Friends for iLife

Every MacBook comes with iLife '08 — an amazing suite of applications that make it easy to live the digital life. Use iPhoto to share entire high-res photo albums with anyone who's got an email address. Record your own

songs and podcasts with GarageBand. Break into indie filmmaking with iMovie HD and iDVD. Then take all the stuff you made on your MacBook and share it on the web in one click with iWeb.² Just turn on your MacBook and you're halfway there.

All smiles

Look closely. See that little lens in the display bezel? That's the built-in iSight camera. Use it to video chat simply by opening iChat AV and clicking a buddy icon (or three).² Or fire up Photo Booth and take a few snapshots with the iSight, play around with 16 fun effects, then admire your handiwork. That little camera lets you create web-ready videos, too. Just open up iMovie and start the action. From there, iWeb makes it one-click easy to get your talking head on the web.³ Looks like fun.

Take it on tour

MacBook also features Front Row, so you can navigate your movies, music, photos, and more at the touch of the included Apple Remote — no matter where you roam. Give an impromptu vacation photo slideshow in your

favorite café. Screen your latest iMovie creation on the train. Watch a DVD in bed. MacBook and Front Row give you the best seat in the house (or out of it).

Positively brilliant

Thanks to a 13.3-inch glossy widescreen display, MacBook provides the perfect combination of pixels and portability. Photos feel crisper. Movies play vividly. Even daily tasks like surfing the web and checking email take on a whole new sheen.

Hit the hot spots

The built-in wireless capability of MacBook puts the “world” back in “World Wide Web.” If there's a wireless hot spot nearby, you can get online. No need to waste valuable surfing time configuring your computer. Just open it up. MacBook automatically detects wireless networks within range and asks nicely if you'd like to join any of them. That's it. Catch up on your blog, share this weekend's trip as a Photocast, or just chat with your friends. Anytime, anywhere.

Same lovable MacBook.
New lovable speed.
